

# Shuta Suzuki

✉ shutas@umich.edu | ☎ +1 (248) 860-0866 | 🏠 57421 Windmill Pointe New Hudson, MI 48165

## PROGRAMMING

C++/C, Python, HTML, CSS, JavaScript, SQL, STATA, MATLAB, Visual Basic,  $\text{\LaTeX}$ , ARMv8 (Assembly), Markdown

## COURSEWORK

### COMPUTER SCIENCE

Programming Concepts  
Discrete Mathematics  
Logic Design  
Data Structures and Algorithms  
Computer Organizations  
Theory of Computation  
Computer Security  
Mobile App Development  
Cryptography  
Software Engineering  
Web Systems

### LINGUISTICS

Syntax  
Semantics  
Language and Discrimination  
Language of Computers  
Computational Linguistics  
Anatomy of NLP Systems

## TECHNOLOGIES

Git, Bash, Make, React, Hadoop, AWS, MapReduce, Flask, TravisCI, NLTK Infer, AFL, EvoSuite, Jinja2

## CERTIFICATIONS

Adobe Dreamweaver, Photoshop, Flash

## LANGUAGES

English: Fluent, Japanese: Fluent

## EXTRACURRICULAR

IEEE, JSA, Billiards Club

## SCHOLARSHIP

Undergraduate Internship Scholarship

## OPEN SOURCE

Oppia

## EDUCATION

### UNIVERSITY OF MICHIGAN | ANN ARBOR, MI

B.S. in Computer Science with Minor in Linguistics | June 2016 - May 2019

**GPA: 3.85/4.00** Graduated with Distinction & Computer Security Track

## WORK EXPERIENCE

### DELOITTE & TOUCHE LLP | NEW YORK, NY

Cyber Risk Consultant | September 2019 -

- Starting full-time position in the fall

### BLOOMBERG LP | TOKYO, JAPAN

Global Data Analyst Intern | June 2018 - August 2018

- Wrote a Python script to automate the daily task of updating stock listings for SBI and Chi-X exchanges via web-scraping and calling Bloomberg API to update information. Saved 180+ hours of manual work annually
- Created a Flask web application tool that maps data points on financial statements to Bloomberg Terminal's database fields to semi-automate the process of on-boarding new data for financial analysts and vendors without technical background. Implemented a simple and clean GUI for usability and portability, mapping 82% of data automatically
- Developed a financial document PDF extraction script that converts PDFs to Excel spreadsheets while retaining the structures and values of complex tables, saving 5 minutes of manual labor per document page

### NOMURA RESEARCH INSTITUTE | TOKYO, JAPAN

Security Consultant Intern | August 2017 - August 2017

- Developed a program that classifies webpages by site owners for corporations to identify lost and outdated webpages that may have software vulnerabilities. Classifier tuned by defining custom rulesets and adjusting parameters to perform textual semantic analysis using a JavaScript framework Fathom
- Developed another Fathom classifier program that compares HTML structures of webpages such as tags, attributes, and user-defined class names along with metadata of these webpages

### UMICH INSTITUTE FOR SOCIAL RESEARCH | ANN ARBOR, MI

Research Assistant I | September 2016 - May 2019

- Implemented client-side validation features on online surveys to filter out participants that did not satisfy certain qualifications using JavaScript, HTML, and Qualtrics API
- Wrote stimulus presentation programs in Visual Basic, integrating eye trackers and EEG headsets to simultaneously record physiological data
- Wrote STATA scripts for cleaning raw survey data, saving 100+ RA hours

## PERSONAL PROJECTS

### PERSONAL WEBSITE | MAY 2018 - CURRENT

- Created a static website using Jekyll and deployed on Netlify servers
- Implemented English/Japanese language switch feature by modifying the Jinja2 template to link the same markdown files written in different languages

### EVENT SIGN IN SCANNER | MAY 2018

- Programmed a student ID card scanner to handle member registration, sign in, and email results for each IEEE event, reducing long lines for sign in.
